measure and test drug efficacy in patients with GLUT1 deficiency. We hypothesize that the disorder would be responsive to erythritol, considering its rapid passage through the blood-brain barrier. We are also planning to evaluate patients treated with erythritol for seizure susceptibility and/or epilepsy or for improved cognition. Interventions for the management of GLUT1 deficiency include dietary modification (\[[@CR3]\]; Eryman & Woolf, 1985). Erythritol is a non-caloric sugar substitute used as a dietary sweetener in a wide variety of food and beverage products. Its low glycemic response has been recognized for decades, and it is safe, inexpensive and free of side effects \[[@CR2]\]. Erythritol was approved in 2007 in Europe, and in 2009 in the USA, for medical use as a sweetener that supports diabetic dietary management. Although erythritol has been shown to significantly reduce blood glucose in patients with GLUT1 deficiency who use it to treat their diabetes, its long-term use in this patient population has not been evaluated. In our pilot study, 18/26 patients with GLUT1 deficiency and diabetes mellitus were using erythritol in the treatment of their diabetes. The dose of erythritol in all patients varied between 10-20 g daily, with about two-thirds of them using it as the primary sweetener to treat their diabetes. Treatment with erythritol as a primary sweetener could be extended to additional patients in future studies. Conclusions {#Sec15} ========== Erythritol is an FDA-approved and
